Bug reports that include steps to reproduce (including code) are preferred Even better, make them in the form of pull requests.. If you want the analyzers to work during your build, and generate warnings and errors during the build, also on build servers, then you want to use the Nuget package.

If you want to use CodeCracker for just one project, install the Nuget package as described above.. Check the official project site on code-cracker github io Build status Nuget count Nuget downloads Issues open This is a community project, free and open source.

A Bluffers Guide to the Watch Escapement Analyser and Timer A small (size 4) movement on the Vibrograf mount / microphone.. TL;DR: If you want to use CodeCracker in all your projects, install the Visual Studio extension (,).
StaticConstructorExceptionAnalyzer Warning Static constructor are called before the first time a class is used but the caller doesn't control when exactly.. Git clone cd CodeCracker msbuild Then add a reference to CodeCracker dll from within the Analyzers node inside References, in Visual Studio.. UseInvokeMethodToFireEventAnalyzer Warning In C#6 a delegate can be invoked using the null-propagating operator (?) and its invoke method to avoid throwing a NullReference exception when there is no method attached to the delegate.. The way you want to use it depends on the scenario you are working on You most likely want the Nuget package.. NameOfAnalyzer Warning In C#6 the nameof() operator should be used to specify the name of a program element instead of a string literal as it produces code that is easier to refactor.. To install from NuGet, for the C# version Install-Package CodeCracker VisualBasic Or use the Package Manager in Visual Studio.. Exceptions thrown in this context force callers to use 'try' block around any usage of the class and should be avoided.. The package is available on NuGet (,) If you want to be able to configure which analyzers are being used in your project, and which ones you will ignore, and commit those changes to source control and share with your team, then you also want the Nuget package.
